

APPENDIX A

TRA PLAN SUMMARY - MANGANESE

BASIC FACILITY INFORMATION

Name & CAS # of Substance	Manganese	7439-96-5
Substance for which other Plans have been prepared	Nickel Zinc	7440-02-0 7440-66-6
Facility Identification and Site Address		
Company Name	Hanson Pressure Pipe	
Facility Name	Uxbridge Pressure Facility	
Facility Address	102 Prouse Rd Uxbridge, Ontario L4A 7X4	
Spatial Coordination of Facility	(UTM Easting, UTM Northing) (640864, 4875996)	
Number of Employees	47	
NPRI ID	17762	
Parent Company (PC) Information		
PC Name & Address	NA	
Percent Ownership for each PC		
Business Number for PC	NA	
Primary North American Industrial Classification System Code (NAICS)		
2 Digit NAICS Code	31-33 - Manufacturing	
4 Digit NAICS Code	3273 - Cement and Concrete Product Manufacturing	
6 Digit NAICS Code	327330 - Concrete Pipe, Brick and Block Manufacturing	

Company Contact Information		
Facility Public Contact	Mr. Steve Gates	Same as Facility address
	Facility Manager	
	(905) 642-4383	
	Fax: (905) 642-4455	
	steve.gates@hanson.com	
Facility Technical Contact:	Mr. Steve Gates	Same as Facility address
	Facility Manager

TOXIC REDUCTION POLICY STATEMENT OF INTENT

Hanson Pipe and Products Canada Inc. (Hanson) is currently using manganese in six processes. Hanson is required to order specific steel products to meet their client specifications. Hanson does not intend to reduce the use of manganese. Hanson does not create manganese, therefore this plan will not address reducing its creation.

REDUCTION OBJECTIVES

Hanson prides itself on technological innovation in order to produce high quality products in an environmentally responsible manner. Hanson will strive to reduce the use of manganese at the Facility. Further, this plan will determine the technical and economic feasibility of each option to determine which, if any, are viable for implementation at this time.

DESCRIPTION OF FACILITY

The Facility utilizes sandstone, Portland cement, and steel to produce reinforced concrete pipe and related products for the construction industry. Metals are welded together to complete fabrication of the re-bar cages. The completed re-bar cages are then filled with concrete and formed as necessary prior to shipping the final product to the customer.

The North American Industry Classification System (NAICS) Code that applies to this Facility is 327330 – Concrete Pipe, Brick and Block Manufacturing.

In 2011, the facility operated from 7:00 a.m. to 4:00 p.m., 5 days a week.

TOXIC SUBSTANCE REDUCTION OPTIONS

After looking into the seven categories of toxic substance reduction options, no options were identified. Explanations are provided in the table below to detail why an option could not be identified in each category.

<i>Toxic Substance Reduction Category</i>	<i>Option: Identification and Description</i>
1) Materials or feedstock substitution	No option identified: Hanson is required to order specific steel products to meet their client specifications. Hanson does not have the ability to change the material or its composition.

<i>Toxic Substance Reduction Category</i>	<i>Option: Identification and Description</i>
2) Product design or reformulation	No option identified: The products are assembled according to customer specifications. The part dimensions and specifications are specified by the clients and Hanson does not have ability to redesign the finished products.
3) Equipment or Process Modification	No option identified: The current equipment used and the processes at the facility produce final products that meet the specifications of the clients. No changes to equipment or modifications would provide a potential reduction in the amount of toxic substances used.
4) Spill and Leak prevention	No option identified: The types of materials used at Hanson are steel and welding rods, which do not pose an issue for spills or leaks.
5) On-site reuse or recycling	No option identified: Hanson reuses excess steel pieces that have been cut for other products. All scrap material that cannot be used are then recycled off-site. Due to the constraints in ordering steel material, there are no options available to Hanson to limit their scrap material that is sent off-site for recycling.
6) Improve inventory management or purchasing techniques	No option identified: Due to the nature of steel and the finished concrete products, improved inventory management or purchasing techniques would not reduce the use of the toxic substances.
7) Training or improved operating practices	No option identified: All employees at Hanson are trained to operate the equipment used in the manufacture of their products. Improved training or operating practices would not reduce the use of the toxic substances.

PLAN SUMMARY STATEMENT

This plan summary accurately reflects the content of the toxic substance reduction plan for manganese.

TOXIC REDUCTION POLICY STATEMENT OF INTENT

Hanson Pipe and Products Canada Inc. (Hanson) is currently using nickel in six processes. Hanson is required to order specific steel products to meet their client specifications. Hanson does not intend to reduce the use of nickel. Hanson does not create nickel, therefore this plan will not address reducing its creation.

REDUCTION OBJECTIVES

Hanson prides itself on technological innovation in order to produce high quality products in an environmentally responsible manner. Hanson will strive to reduce the use of nickel at the Facility. Further, this plan will determine the technical and economic feasibility of each option to determine which, if any, are viable for implementation at this time.

DESCRIPTION OF FACILITY

The Facility utilizes sandstone, Portland cement, and steel to produce reinforced concrete pipe and related products for the construction industry. Metals are welded together to complete fabrication of the re-bar cages. The completed re-bar cages are then filled with concrete and formed as necessary prior to shipping the final product to the customer.

The North American Industry Classification System (NAICS) Code that applies to this Facility is 327330 - Concrete Pipe, Brick and Block Manufacturing.

In 2011, the facility operated from 7:00 a.m. to 4:00 p.m., 5 days a week.

TOXIC SUBSTANCE REDUCTION OPTIONS

After looking into the seven categories of toxic substance reduction options, no options were identified. Explanations are provided in the table below to detail why an option could not be identified in each category.

<i>Toxic Substance Reduction Category</i>	<i>Option: Identification and Description</i>
1) Materials or feedstock substitution	No option identified: Hanson is required to order specific steel products to meet their client specifications. Hanson does not have the ability to change the material or its composition.
2) Product design or reformulation	No option identified: The products are assembled according to customer specifications. The part dimensions and specifications are specified by the clients and Hanson does not have ability to redesign the finished products.

<i>Toxic Substance Reduction Category</i>	<i>Option: Identification and Description</i>
3) Equipment or Process Modification	No option identified: The current equipment used and the processes at the facility produce final products that meet the specifications of the clients. No changes to equipment or modifications would provide a potential reduction in the amount of toxic substances used.
4) Spill and Leak prevention	No option identified: The types of materials used at Hanson are steel and welding rods, which do not pose an issue for spills or leaks.
5) On-site reuse or recycling	No option identified: Hanson reuses excess steel pieces that have been cut for other products. All scrap material that cannot be used are then recycled off-site. Due to the constraints in ordering steel material, there are no options available to Hanson to limit their scrap material that is sent off-site for recycling.
6) Improve inventory management or purchasing techniques	No option identified: Due to the nature of steel and the finished concrete products, improved inventory management or purchasing techniques would not reduce the use of the toxic substances.
7) Training or improved operating practices	No option identified: All employees at Hanson are trained to operate the equipment used in the manufacture of their products. Improved training or operating practices would not reduce the use of the toxic substances.
